

SEVERE WEATHER BULLETIN #9 FOR: TROPICAL DEPRESSION "CRISING" TROPICAL CYCLONE: WARNING

ISSUED AT 5:00 AM, 14 May 2021

(Valid for broadcast until the next bulletin to be issued at 8 AM today)

"CRISING" SLIGHTLY WEAKENS AS IT CONTINUES TO APPROACH THE PANTARON MOUNTAIN RANGE.

Hazards affecting land areas

Heavy Rainfall:

- Today, light to moderate with at times heavy rains may be experienced over Davao Oriental, Davao de Oro, Davao del Norte, Davao City, Cotabato, Maguindanao, Bukidnon, Lanao del Norte, Lanao del Sur, Misamis Occidental, Zamboanga del Sur, and the northern portion of Zamboanga del Norte.
- Under these conditions, isolated flash flooding and rain-induced landslides are possible during heavy or prolonged rainfall especially in areas that are highly or very highly susceptible to these hazards as identified in hazard maps. Adjacent or nearby areas may also experience flooding in the absence of such rainfall occurrence due to surface runoff or swelling of river channels.
- PAGASA Regional Services Divisions may issue local thunderstorm/rainfall advisories and heavy rainfall warnings while the Hydrometeorology Division and River Basin Flood Forecasting and Warning Centers may issue General Flood Advisories and Basin Flood Bulletins as appropriate.

Severe Winds:

Strong breeze conditions are likely over the localities where Tropical Cyclone Wind Signal #1 is in effect, especially in the coastal and mountainous areas of these localities.

Hazards affecting coastal waters

In the next 24 hours, under the influence of Tropical Depression "CRISING", moderate to rough seas will be experienced over the seaboard of areas under TCWS #1 (1.2 to 2.8 m). Mariners of small seacrafts are advised not to venture out over these waters. Inexperienced mariners of these vessels should avoid navigating in these conditions.

Track and Intensity Outlook

- "CRISING" will continue moving westward or west northwestward and cross the rugged terrain of Mindanao before emerging over the Sulu Sea tonight. On the forecast track, the tropical depression may cross Palawan tomorrow.
- This tropical depression is forecast to weaken into a remnant low tomorrow prior or during its landfall over Palawan and dissipate shortly afterwards. However, due to the expected deterioration in the circulation of the tropical depression while traversing Mindanao, there is an increasing possibility that the "CRISING" will degenerate into a remnant low today.
